Hydration for the Child Athlete

Athlete Scenerio

I love basketball and I play it all year! I get really sweaty and thirsty at practice but we don't stop for water breaks very often. Sometimes I forget to bring a water bottle. We always have water at games, but I usually don't remember to drink anything unless I'm really thirsty. I see professional basketball players drinking sports drinks on TV. Should I drink them too?

Goals of Hydration:

- Start practice well-hydrated by drinking water periodically throughout the day.
- Keep fluid loss to a minimum during practice and games to avoid dehydration.
- Replace fluids lost during exercise by drinking immediately after practice or games and throughout the day.

Strategies to Help Young Athletes Stay Hydrated :

- Within the hour before exercise, encourage drinking 8–20 oz. of fluid (water or sports drink).
- Children need fluids (3–5 oz.) every 15–20 minutes during practice or games and encouragement to drink whenever thirsty. Aim for 12–20 oz. per hour.
- Provide sports drinks during vigorous physical activity that lasts over an hour or when temperatures are hot to replace fluids and electrolytes. For events under an hour, water is sufficient.
- Encourage drinking immediately after exercise: 16–24 oz. (per pound lost), or more if temperatures were hot and sweating was heavy.
 A white residue on the skin or clothing indicates sodium loss and suggests a sports drink to rehydrate.

Written by SCAN registered dietitians (RDs). The key to optimal meal planning for athletes is individualization. For personalized nutrition plans contact a SCAN sports dietitian or Board Certified Specialist in Sports Dietetics (CSSD) by accessing "Find a SCAN Dietitian" at **www.scandpg.org** | **800.249.2875**.

Tips to Take With You

- Check your urine color—clear to light yellow usually indicates adequate hydration.
- 2. Drink frequently during exercise by following your personal hydration plan. One gulp equals about an ounce of fluid.
- A sports RD (registered dietitian) can help you develop a personalized hydration strategy.
